

Game Proposal: “Treasure Box Game”

1. Title

Treasure Box Game

2. Idea

The player opens mystery treasure boxes to earn points.

Each box gives **random rewards or penalties**, and the final score is saved in a file.

It feels like a *lucky draw game* — simple but fun.

3. Features

- Open Treasure Box (button click)
 - Random score generation (+10, -5, +20, etc.)
 - Display current score
 - Save score in file
 - Load previous scores
-

4. How the Game Works

1. User opens the game
2. GUI shows:
 - Score = 0
 - Button: “**Open Box**”
3. Each click:
 - Random result happens:
 - +10 points
 - -5 points
 - +20 points
4. Score updates on screen
5. After few turns → game ends
6. Score is saved in file

5. File Handling

I will use file handling to store the player's score in a text file.
Each time the game ends, the score is written into the file.
The program can also read previous scores from the file.

6. Target Score Reached

The game ends when player reaches a score.

Example:

- If score $\geq 50 \rightarrow$ player wins
- If score $\leq -20 \rightarrow$ player loses

7. GUI Design

- Label $\rightarrow$ "Score: 0"
 - Button $\rightarrow$ "Open Box"
 - Button $\rightarrow$ "Save Score"
 - Text area $\rightarrow$ Show previous scores
-

8. Technologies

- Java
- Swing (GUI)
- File Handling (`.txt file`)
